

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	ADVENTIST HEALTH HANFORD
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106164029
Report Period:	01/01/2024 - 12/31/2024
Status:	Submitted
Due Date:	11/29/2025
Last Updated:	11/25/2025
Hospital Location with Clean Water and Air:	N
Hospital Web Address for Equity Report:	https://www.adventisthealth.org/about-us/health-equity

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce-health-care-disparities/>

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/ unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/ unknown languages category.

117323

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	88017	117323	75.0
Spanish Language	28759	117323	24.5
Asian Pacific Islander Languages	184	117323	0.2
Middle Eastern Languages	184	117323	0.2
American Sign Language	32	117323	0.0
Other Languages	147	117323	0.1

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.

- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

5141

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

7070

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

16.0

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	265	5.0	0	
Housing Instability	228	4.0	0	
Transportation Problems	230	4.0	0	
Utility Difficulties	92	2.0	0	
Interpersonal Safety	9	0.0	0	

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

569

Total number of respondents to HCAHPS Question 19

618

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

92.1

Total number of people surveyed on HCAHPS Question 19

6867

Response rate, or the percentage of people who responded to HCAHPS Question 19

9.0

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Don't know					
Not disclosed					

Gender Identity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

538

Total number of respondents to HCAHPS Question 17

618

Percentage of respondents who responded "yes" to HCAHPS Question 17

87.1

Total number of people surveyed on HCAHPS Question 17

6867

Response rate, or the percentage of people who responded to HCAHPS Question 17

9.0

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarean birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

199

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

394

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

50.5

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

608

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

7057

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition within 30 days of hospital discharge for patients aged 18 and older

8.6

Table 10. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate for any eligible condition by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			18 to 34	3.2	4.0
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			18 to 34	3.2	3.9
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity			Hispanic or Latino	8.4	3.0
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor			Private	5.2	2.6
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (No Behavioral Health Diagnosis)	Sex Assigned at Birth			Female	5.2	2.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity			Hispanic or Latino	8.4	2.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Sex Assigned at Birth			Female	6.4	2.0
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			18 to 34	3.2	2.0
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor			Private	5.2	1.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Preferred Language			English Language	8.2	1.3

Plan to address disparities identified in the data

Disparity #6 Race and/or Ethnicity: White

Population Impact: Race and/or Ethnicity: White disparity rate 8.7% in comparison to the reference range of Hispanic or Latino 8.3% for All Cause 30 Day Unplanned Readmissions, creating a ratio of 2.1.

Disparity #7 Sex Assigned at Birth: Male

Population Impact: Sex Assigned at Birth: Male disparity rate 12.8% in comparison to the reference range of Female 6.4% for All Cause 30 Day Unplanned Readmissions, creating a ratio of 2.0.

Disparity #8 Age (excluding maternal measures): 35 to 49

Population Impact: Age (excluding maternal measures) 35 to 49 disparity rate 6.3% in comparison to the reference age range of 18 to 34 rate 3.2% for All Cause 30 Day Unplanned Readmissions, creating a ratio of 2.0.

Disparity #9 Expected Payor: Medicaid

Population Impact: Expected Payor: Medicaid rate 7.2% in comparison to Private Payor rate 5.2% for All Cause 30 Day Unplanned Readmissions, creating a ratio of 1.4.

Disparity #10 Preferred Language: Spanish Language

Population Impact: Preferred Language: Spanish preferred language rate 10.5% in comparison to English preferred language rate 8.2% for All Cause 30 Day Unplanned Readmissions, creating a ratio of 1.3%.

Disparity 1-10 Action Plans:

677G atification by disparity shared with the multidisciplinary committees to help target the specific identified disparities within the readmission reduction performance improvement work.

677VFR 4D, 67&VVæ-æR &Pview and provide interventions to help ad

the health equity barriers identified to the individual patient. ð

â?ç•&÷VæF-ærior to patient discharge by the care management team to confirm communication preference prior to disposition for the care transition team needs. ð

â?ç"ollow up appointments made prior to discharge for all high-risk readmission patients within the provider recommended timeframe. ð

â?ç"ÖVG2 Fò &VG2 &öpram exploration and development to address access barriers for high-risk readmission patients. ð

â?ç"ÖVF-6 F-öâ FVÆ—`ery options shared as part of the discharge planning that deliver to surrounding rural communities. ð

â?ç"ollow up calls to help assist with care coordination post disposition are made within 48hrs of discharge for all high-risk readmission patients. ð

Measurable Objective: Reduce All-Cause Unplanned 30-Day Hospital Readmission for Disparities 1-10 ð

Disparity 1: 65 and Older by 1% within 24 months. ð

Disparity 2: Age: 50 to 64 by 1% within 24 months. ð

Disparity 3: Race and/or Ethnicity: Black or African American by 1% within 24 months. ð

Disparity 4: Expected Payor: Medicare by 1% within 24 months. ð

Disparity 5: Stratified by behavioral health diagnosis (No Behavioral Health Diagnosis) Sex assigned at birth: Male by 1% within 24 months. ð

Disparity 6: Race and/or Ethnicity: White by 1% within 24 months. ð

Disparity 7: Sex Assigned at Birth: Male by 1% within 24 months. ð

Disparity 8: Age (excluding maternal measures): 35 to 49 by 1% within 24 months. ð

Disparity 9: Expected Payor: Medicaid by 1% within 24 months. ð

Disparity 10: Preferred Language: Spanish Language by 1% within 24 months. ð

Timeframe: All action plans are in progress with a multidisciplinary committee leading and tracking improvement through the duration of the action plan.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

Adventist Health Hanford recognizes the significant importance of patient-centered care and incorporates the individualâ??s goals, concerns, values and right for self-determination within the care planning process. The key performance activities in place to incorporate patient centered care are as follows. ð

â?ç"6öÆÆV7F-öâ öb 6ö6- Â G ivers of health data starts at the beginning of a personâ??s hospitalization visit and is incorporated within the patient data profile capture. ð

â?ç"6 GW&VB 6ö6- Â G ivers of health data is reviewed by the discharge planning care management team as part of their discharge planning assessment early in the patient stay. Any needs identified, are given resources to address the patientâ??s specific barriers. ð

â?ç"×VÇF-F-66- Æ-æ y care rounds occur daily at the patient bedside with the care team including, but not limited to, attending care provider, nurses, care management, pharmacy, rehabilitation services, nutrition, wound care, palliative care, and respiratory therapy. This comprehensive team rounding together with the patient allows for open dialogue between the care team and the patient for goals for the daily hospital care while also planning for patients needs when transitioning to their post

hospital setting. ð

Personalized care planning and discharge planning is tailored to the patient's physical, emotional and wellbeing health needs respecting the patient's cultural, spiritual, and personal preferences. ð

Various language interpreter, translation and American Sign Language video services are utilized for communication with the patient based on the identified preferred language assessed from the start of the patient visit. This service reduces any barrier to communication with the patient regarding their care, treatment, and instruction. ð

— Spiritual support services are provided on-site as well as on-call to meet the individual spiritual and emotional needs of the person including all faith and backgrounds. ð

Patient Portal is available to the patient during and after their stay allowing for secure access to test results, visit summaries and other records. ð

Patient education preferences are assessed and considered with delivery of instruction. The care team utilizes multimodal education including, but not limited to, handouts, verbal, teach-back and digital to best meet the patient's individual needs. ð

Patient Experience is a priority to the various service lines within the hospital setting. Patient Experience Surveys are sent, collected, analyzed, and shared for continued performance improvement activities to improve patient care.

Patient safety

As an organization, Adventist Health Hanford consistently strives to achieve high reliability through application of just culture for accountability, implementation of culture of safety, and use of data systems for improved standardization. Safety events are analyzed for improvement opportunities and standardization of process, assessments, and interventions are developed with evidenced based practice with the goal to minimize risk, prevent errors and provide quality of care. ð

Incident reduction strategies are a part of the organization systems and processes, and each occurrence is thoroughly reviewed and addressed with the goal to prevent recurrence, including but not limited to, Patient Safety Indicators, Hospital Associated Conditions, medication safety, infection prevention, environment of care, mortality, readmission, and sepsis. ð

Improvement program is integrated through the hospital services and departments with quality and safety a priority of focus.

Addressing patient social drivers of health

Adventist Health Hanford assesses patient's social needs with the disposition planning beginning on arrival to the organization. The data is collected and utilized in the care planning process with early assessment of the patient's potential barriers to care and social determinants of health. Interventions are then applied to help reduce the social barriers to their health and wellbeing with their care transition. The organization has sustained a high assessment participation rate that exceeds the 2024 target. ð

Screenings for food insecurity, housing instability, transportation, utilities, and safety concerns. These screenings are utilized in the discharge care planning process and appropriate resources given to assist with the patient need. ð

Program that allows free access to lifesaving substance abuse lifesaving agents. ð

Navigator resources are utilized to see patients with substance abuse needs included but not limited to, in person visits, follow up calls, rehabilitation needs, and community programs for recovery. ð

Transition of care visits are arranged with the rural health clinics when patients do not have a primary care provider set up to help address their immediate post discharge care needs and establish care with a provider. ð

Provided based on a person's social drivers impacting their health including but not limited to, local and state financial programs in the area, charity care for any healthcare billing support for those who qualify, transportation, church vouchers for hotels, local food banks,

meals on wheels, community rehabilitation and recovery services, senior center referrals, durable medical equipment needs, and indigent resource packets. Any safety or security needs are thoroughly assessed with targeted interventions to help support the individual.

Performance in the priority area continued

Performance across all of the following priority areas.
