

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	ADVENTIST HEALTH ST. HELENA
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106281078
Report Period:	01/01/2024 - 12/31/2024
Status:	Submitted
Due Date:	11/29/2025
Last Updated:	11/20/2025
Hospital Location with Clean Water and Air:	Y
Hospital Web Address for Equity Report:	https://www.adventisthealth.org/about-us/health-equity

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce-health-care-disparities/>

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/ unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/ unknown languages category.

15499

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	13470	15499	86.9
Spanish Language	1884	15499	12.2
Asian Pacific Islander Languages	suppressed	15499	suppressed
Middle Eastern Languages	suppressed	15499	suppressed
American Sign Language	suppressed	15499	suppressed
Other Languages	125	15499	0.8

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.

- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

1054

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

1990

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

20.0

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	118	11.2	0	
Housing Instability	119	11.3	0	
Transportation Problems	90	8.5	0	
Utility Difficulties	41	3.9	0	
Interpersonal Safety	9	0.9	0	

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

382

Total number of respondents to HCAHPS Question 19

394

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

97.0

Total number of people surveyed on HCAHPS Question 19

1515

Response rate, or the percentage of people who responded to HCAHPS Question 19

26.0

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language

Gender Identity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

347

Total number of respondents to HCAHPS Question 17

394

Percentage of respondents who responded "yes" to HCAHPS Question 17

88.1

Total number of people surveyed on HCAHPS Question 17

1515

Response rate, or the percentage of people who responded to HCAHPS Question 17

26.0

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarean birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

NA

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

316

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

2161

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition within 30 days of hospital discharge for patients aged 18 and older

14.6

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor			Private	12.8	1.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor			Private	12.8	1.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			65 and older	14.2	1.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity			Hispanic or Latino	13.0	1.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (No Behavioral Health Diagnosis)	Sex Assigned at Birth			Male	14.6	1.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Sex Assigned at Birth			Male	14.3	1.0

Plan to address disparities identified in the data

Disparities 1-6 are all related to All-Cause Unplanned 30-Day Hospital Readmission Rates (see above);

Action Plan:

Adventist Health St. Helena is addressing identified disparities in readmission rates by payer, age, race/ethnicity, and sex through targeted interventions and monitoring. Efforts include expanded post-discharge follow-up calls and/or provider visits (in-person or via telemedicine) for Medi-Cal and older adult populations and those with chronic disease conditions, improved care coordination with community/ interfacility partners, focus on improved nutrition and early ambulation for patients while in the Hospital (Well Fed and Out of Bed initiative), utilization of nurse navigators for key destination programs, patient family education for post-discharge care, and offer medications for dispensing before discharge (Meds to Beds Program).

The hospital aims to reduce the readmission gap between payer types, gender, and across racial/ ethnic groups by 10% within 12 months. Progress will be tracked quarterly through the QAPI/Patient Safety Committee with results shared in the Hospital's Clinical Committee meetings.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

Adventist Health St. Helena is committed to providing patient-centered care, ensuring that the patient's concerns, values, and preferences are central to all healthcare decisions. Our approach

emphasizes respect, compassion, and collaboration, with the goal of delivering care that is personalized to each patient's individual needs, beliefs, and cultural background.

Key Strategies

Patient Registration: Collection of Social Determinants of Health Data to improve equitable access

Shared Decision-Making: The Care Team is empowered to participate in shared decision-making with patients, integrating patients' needs, preferences, and values into individualized care plans.

Care Rounds: Daily rounds involving physicians, nurses, pharmacists, case managers, and physical therapists to promote comprehensive and coordinated care tailored to each patient.

Language Services: Interpreters and translation services are provided to facilitate communication in each patient's preferred language, ensuring understanding and inclusivity.

Community Engagement Initiatives: Partnerships with local organizations to support food drives, health fairs, and community immunization clinics.

Shift Handoffs: Nurses conduct shift handoffs at the bedside, actively involving patients and families in discussions about their care and treatment plans.

Spiritual and Emotional Support: On-site chaplaincy services provide individualized spiritual care and emotional support to patients and families of all faith and ethnic backgrounds.

Personalized Care Plans: Care plans are collaboratively developed to reflect each patient's cultural, spiritual, and personal preferences.

Patient Engagement: Patients have secure online access to test results, visit summaries, and messaging with providers.

Patient Education and Communication: The teach-back method is utilized to confirm patient understanding of diagnoses, treatment plans, and discharge instructions upon care transition

Patient safety

Patient Safety

At Adventist Health St. Helena, patient safety is a top priority, ensuring a healthcare environment that minimizes risk and prevents errors to provide quality of care.

Key Strategies

Environment of Care Rounds, ensuring a safe patient care environment.

Morning safety huddles, and department-based safety huddles

Targeted focus on VTE/ DVT prevention

Mortality and Sepsis Review Committee

Hygiene monitoring system

Review of central line and catheter necessity and removal.

Antibiotic Stewardship Program: Ensures appropriate antibiotic selection, dosing, and duration. High-risk antibiotic orders are regularly reviewed to optimize therapy and reduce resistance.

Addressing patient social drivers of health

Adventist Health St. Helena supports patients' social needs through data collection on admission. Included in the Social Determinates of Health (SDoH) are questions regarding: housing instability, Food Insecurity, Utility Difficulties, Transportation Needs, and Interpersonal Safety. The data is utilized for care planning and intervention during the patient stay and upon discharge. For 2024 data demonstrated the following response rates:

Social Determinant of Health / Response %

Housing Instability / 8.0%

Food Insecurity / 11.3%

Utility Difficulties / 4.7%

Transportation Needs / 10.7%

Interpersonal Safety / 0.0%

Ⓜ

Source: AHS Social Determinants Health

Ⓜ

AHS provides patients with:

• Access to food banks in their communities including Napa, Lake, and Mendocino County
• Transportation (shuttle service, two times per day M-F for cancer patients who live in Lake County. AHS cancer center is the closest provider to this rural area, where 48% of the center's patients are from. Many patients fall below the poverty line, and transportation is the largest barrier to treatment.

AHS addressed food insecurity by providing free fresh produce to community members through 35 events in 2024 resulting in:

• Distribution of 53,365 pounds of fresh produce

• Provided food to 100 families/ month

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

Adventist Health St. Helena delivers timely, evidence-based care to achieve the best possible patient outcomes. To ensure the current clinical guidelines are being followed and that desired quality outcomes are obtained AHS:

• The Joint Commission Disease-Specific Primary Stroke Certification and partners with the University of San Francisco to provide telemedicine support for stroke patients. In addition AHS participates in the American Heart Association Get with the Guidelines Stroke Registry to ensure that stroke patients receive the most current evidence-based care. The Hospital also provides community education on how to recognize early signs of stroke.

• The Joint Commission Disease-Specific Advanced Total Joint Replacement Certification and participates in the American Joint Replacement Registry ensuring that the Hospital is providing current evidence-based care.

• Certification by the Commission on Cancer which promotes cancer prevention, research, education, and monitoring of comprehensive quality care in the Hospital's Martin O'Neil Cancer Center

• Participates in the following cardiovascular service line national registries:

-Society for Thoracic Surgery Cardiac Surgery Database (Outcomes registry for adult cardiac surgery)

-STS/ ACC TVT Registry (Monitors patient safety and outcomes related to transcatheter aortic valve replacement (TAVR))

-Carotid Arter Stent Registry

-CathPCI Registry (assessed treatments and outcomes of patients who receive diagnostic catheterization and/or percutaneous coronary (PCI) procedures) Ensuring adherence to clinical practice guidelines.

-EP Device Implant and LAO Registries

• Vital health treatments are safely initiated and monitored, while sepsis protocols ensure prompt antibiotics and fluid administration.

Care coordination

Adventist Health St. Helena promotes a collaborative care coordination model, ensuring that physicians, nurses, pharmacists, and other specialists communicate effectively so each patient

treatment plan is seamless and well-coordinated. These efforts ensure continuity of care, enhance patient safety, and support smooth transitions across healthcare settings.

Key Strategies:

6 & R Transition Program: Case managers coordinate discharge planning, follow-up appointments, and connection to community resources.

Post-Discharge Follow-Up: Patients receive follow-up calls to review medications, monitor symptoms, and confirm appointments.

Interdisciplinary Rounds: Nurses, case managers, physicians, physical therapists and pharmacists meet to discuss patient needs for safe and coordinated discharges.

Transportation Support: Provide assistance to patients who lack access to transportation for appointments.

Community Coordination: Coordination with post-acute and community services for referrals to additional resources based on Health Related Social Needs.

Access to care

Adventist Health St. Helena is committed to ensuring patients can easily connect with providers and receive necessary tests and treatments without barriers. This is accomplished through the utilization of a transfer center which ensures that patients are sent to a facility which is best suited to providing the necessary care. The transfer center also facilitates one to one conversations between providers so that care upon receipt of the patient is efficient and targeted to the patients needs. Financial access is supported through charity care, financial assistance programs, insurance access through financial coordinators, and flexible payment options. Transportation services help patients attend scheduled appointments and follow-up care. Additionally, the AHSH foundation provides immunizations and nutritional support to underserved populations in the local communities. Community education programs focus on cancer screening, treatment and prevention, early stroke recognition, and mental health wellbeing.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
